

LIFE EDUCATION TECHNOLOGY

By Amadou B.

Intro to Soc 100

BMCC, Spring 2018

Prof. Remi Alapo

LIFE

Life has different **definition** in the eyes of different people. For many **life** is all about love. For a few, **life** is all about religious practices. Man is biologically and psychologically equipped to live in groups, in **society**. **Society** has become an essential condition for human **life** to arise and to continue.

EDUCATION

In our culture today, there is a huge emphasis on education, especially higher education. Society basically says the more educated you are, the better off you are. That is pretty much true if you live by the means of society. The basic idea that education, especially a college education, is something that people should pursue even into their adult years is not by any means a new idea. Whatever the form, the meaning is the same, gain knowledge and use it.

**“EDUCATION
IS THE MOST POWERFUL
WEAPON WHICH YOU CAN USE TO
CHANGE THE WORLD.”**

**NELSON
MANDELA**

Technology

Positive

Improved The Transportation Sector

Technologies like automobiles, airplanes, speedboats, electric trains, have made moving from one place to another so easily.

Improved on Human Relationships And Connection

Technology has improved on how we connect or discover new relationships. Mobile phones and internet social Medias, people can connect with each so easily than before.

Negative

Lack Or Real Life And Friends

The number of people who spend time alone is increasing. You will find a person spends more time in the virtual world chatting with strangers "virtual friends"
